

# M1 ABRAMS MAIN BATTLE TANK

## Mission

To provide heavy armor superiority on the battlefield

## Entered Army Service

1980

## Description and Specifications

The M1 Abrams Main Battle Tank closes on and destroys enemy forces on the battlefield using mobility, firepower, and shock effect. There are three variants in service: M1, M1A1, and M1A2. The gun on the M1A1 and M1A2 – combined with the 1,500 hp turbine engine and special armor – make the Abrams tank particularly suitable for attacking or defending against large concentrations of heavy armor forces on a highly lethal battlefield.

**M1A2 Abrams**

The M1 has a crew of four. The driver sits centered in the hull and forward of the turret, while the loader, gunner and tank commander occupy the turret, with the loader situated to the left of the main gun and the gunner and tank commander sitting in tandem on the right side. The driver's hatch has three periscope vision blocks which provide for forward vision.

The engine is mounted in the rear of the vehicle with the exhaust coming out from a louvered grill centrally mounted in the rear of the hull. The M1 utilizes a torsion bar suspension with seven pairs of cast aluminum road wheels and two return rollers. The drive sprocket is to the rear, an idler compensation wheel is located forward, and there is a gap between the first and second pair of road wheels. The M1 has armored skirts running the full length of the track.
